

Expanding the panel of diagnostic tests for neurodegenerative diseases

EUROIMMUN Neurofilament (pNf-H) ELISA

- A novel biomarker for neurodegenerative motor neuron diseases, e.g. amyotrophic lateral sclerosis (ALS)
- Assists in the early, reliable routine diagnosis and differentiation between motor neuron diseases and disease mimics
- Detection of pNf-H (phosphorylated neurofilament heavy chain) in CSF or serum
- First commercial immunoassay with CE certification
- Easy and time-saving procedure with a turnaround time of 135 min
- Fully automatable
- Ready-to-use reagents
