

EUROIMMUN P-Tau (pT181) ELISA

A fast & precise alternative for your laboratory

- Specific detection of threonine-181 phosphorylated tau protein in human CSF
- No overnight incubation needed – Time to result <4 h
- No duplicate testing necessary
- Excellent correlation to other relevant assays in the market
- Incubation protocol identical to those of beta-amyloids and total tau assays
- Fully validated – CE-labelled
- Fully automatable
